

A long, brightly lit industrial laundry room. Rows of white and grey front-loading washing machines are lined up on both sides of a central aisle. The floor is a vibrant green. Numerous yellow plastic buckets are scattered throughout the room, some stacked and some on the floor. In the background, a person is visible near a doorway. The ceiling features recessed fluorescent lighting.

INDUSTRIAL FLOORING

Concrete floors are suitable for many industrial settings but inevitably deteriorate without protection. This is particularly the case in high-wear environments or where liquids or chemicals are involved.

Resin delivers significant advantages for these industrial applications, as well as in places where concrete may also be unsuitable for cleanliness, hygiene or aesthetic reasons.

Resin for protection, looks and safety

A resin flooring system is an effective way of protecting against abrasion, impact and many chemicals. Available in a wide range of colours to compliment corporate colour schemes, it's also easy to clean thanks to its hygienic non-porous surface.

Resin systems can also be used to create a more pleasing working environment and increase operational efficiency with zone demarcation, material footprints, cross-hatching and other management tools. Additional benefits include increased light levels in workshops and warehouses.

With anti-slip finishes ever more important in industrial settings, we also offer a range of textured finishes that meet HSE requirements.

Extensive choice

An approved installer for most major manufacturers, Oasis offers an extensive choice ranging from dustproof sealers to heavy duty epoxy or polyurethane screeds capable of resisting

heavy mechanical loading or steam cleaning. We work with you from the start to identify your requirements and understand your working environment to achieve the most appropriate and cost effective solution. We offer written guarantees for up to 10 years, with expected lifespans longer still.

Preparation, preparation, preparation

When installing any resin floor application, it's vital to ensure the substrate is correctly prepared. At Oasis we've invested heavily in floor preparation equipment ranging from industrial washer scrubbers, to hand grinders and scabblers with triple motor vacuums, to ensure the process is dust-free. Meticulous preparation ensures the resin finish bonds fully with the substrate.

Using a variety of polymer-based mortars and other screeding material, we also undertake repairs to damaged substrate and to correct falls before any floor finish is applied.

Working around you

To minimise disruption, we can work around your production schedules and also offer out-of-hours working including bank holidays. In some cases, we can also speed up curing times by using appropriate additives.

Project: Changing rooms

System: Remmers self-levelling resin floor including decorative flakes and anti-slip sealer

Choosing the right flooring finish can be the most important factor in creating an attractive and memorable environment.

Traditional floor finishes such as vinyls, carpet and timber are suited to a range of applications. But resin based systems offer superior performance in heavy wear environments, in situations where there's potential for liquid spillage, when easy cleaning is important or where a client wishes to create a 'wow' factor.

Limitless colours

By combining coloured flakes and stone aggregates with the resins traditionally found in industrial settings, we create a finish that combines the durability and easy cleaning you'd expect from a resin floor with high aesthetic appeal. A wide range of decorative systems is available in almost limitless colour combinations.

Self-smoothing resin

Smooth, high gloss floor perfect for show areas

An anti-slip clear seal coat makes this equally suitable for reception areas and bars, as well as dance floors and canteens. We can add decorative flakes to the resin when still wet before sealing.

Pebble systems

Textured finish creating a stone carpet effect

Available in a wide range of colours - including metallic finishes - the stones are bound in a clear resin to create a slightly open texture. We then lay them in attractive patterns using contrasting adjacent colours. This system is ideal in situations where a carpet would be suitable, but you need a much more hardwearing and easy to clean finish.

Coloured quartz systems

Closed finish with high scratch and slip resistance

By installing an integral cove base we can create seamless wall to floor coatings if required. We're frequently asked to install coloured quartz in changing areas, laboratories and retail environments.
